

Encyclia flabellifora

Native of: Brazil

Habitat: Species from the Sao Paulo area and so will be warm growing.

Description: Blooms on a lax, apical, racemose inflorescence. It is said to be a synonym of *Encyclia ionosma* but these 2 species are quite different if they are labelled correctly. Unable to find much information on this species as yet.

Cultivation Guidance: At school we grow similar species warm (min.15°C) in pots with good light.

Flowering season ?

Flask to flowering approx: 4yrs.

Seedling source: Bob & Paddy Dadd
