

# Jumellea wallei

(This is not *Jumellea wallei* but shows a *Jumellea* flower and *wallei* should look similar)

**Native of:** Madagascar

**Habitat:** We have no exact details but *Jumelleas* are generally warm growing epiphytes.

**Description:** *Jumelleas* all have single white flowers with a long spur. Plant size and habit are variable.

**Cultivation Guidance:** At school we grow similar species warm (min. 15°C) and mounted on bark its range suggests it could grow cooler.

**Flowering season ?**

**Flask to flowering approx. 4yrs**

**Seedling source:** Bob & Paddy Dadd
