

# Angraecum protensum

**Native of:** Madagascar

**Habitat:** Lithophyte growing on rocks at high altitudes from 2000m.

**Description:** Medium sized plant that forms a clump & produces large flowers of a very pure white.

**Cultivation Guidance:** At school we grow similar species in pots up on a shelf to get good light. Because of its altitude this plant should need intermediate temperatures (min 12°C).

**Flowering season:** August

**Flask to flowering approx.** 4yrs.

**Seedling source:** Bob & Paddy Dadds
