

# Dendrobium lawesii

**Native of:** Papua New Guinea

**Habitat:** Epiphyte on forest trees at an elevation of about 1000m.

**Description:** A medium sized plant with slender pseudobulbs up to 30cm long. The long lasting flowers are produced in clusters over a long period from leafless pseudobulbs. They come in a wide range of colours and we expect these to be a purple and white bicolor.

**Cultivation Guidance:** At school we grow this species hot (min.18°C) through out the year in medium light. Some we grow in pots some we grow mounted where they grow in a pendulous fashion.

**Flowering season:** most of the year

**Flask to flowering approx:** 3yrs.

**Seedling source:** Kath Fairhurst
