

# Holcoglossum rupestre

**Native of:** China (North West Yunnan)

**Habitat:** A twig epiphyte from around 1000m.

**Description:** A miniature plant with relatively large flowers.

**Cultivation Guidance:** At school we grow similar species warm (min.15°C) and mounted on bark. Its range suggests it could grow cooler.

**Flowering season** Not known

**Flask to flowering approx.** Probably 3 years

**Seedling source:** Kath Fairhurst
