

# Disa Kewensis

**Native of:** South Africa (primary hybrid of *Disa uniflora* and *Disa tripetaloides*)

**Habitat:** The parents grow in mass on stream banks in the mountains of the Western Cape.

**Description:** Large orange flowers with up to 5 flowers on a stem.

**Cultivation Guidance:** At school we grow this cool (min.4<sup>0</sup>C) in mix of moss and perlite with a little bark. We keep plants damp from autumn to spring but completely dry all summer.

**Flowering season:** Summer

**Plant source** – Writhlington Division
