

Masdevallia laucheana

Native of: Costa Rica

Habitat: An epiphyte from wet forest from 1300 to 1500m.

Description: A small growing plant with 4cm leaves producing many 2cm flowers on short stems.

Cultivation Guidance: At school we grow this species cool (min 10°C). Its natural habitat suggests it would be happy to grow warmer than this.

Flowering season: Autumn - spring

Flask to flowering approx: 3yrs.

Plant Source: Private Grower
