

Oncidium longipes

Native of: Brazil

Habitat: We found this species growing in Brazil's coastal cloud forest at between 1100 and 1300m altitude on exposed trunks and branches.

Description: A small plant that makes an excellent specimen in time. Each growth produces a relatively large 2cm flower in a combination of brown, green and yellow.

Cultivation Guidance: At school we grow this cool (min.10°C) in good light and with more water when growing and less when resting (usually in the winter).

Flowering season: Autumn
