

# Dendrobium amphigenyum

(this is *Dendrobium woodsii*, *Dendrobium amphigenyum* differs by having a shorter mid-lobe to the lip)

**Native of:** New Guinea

**Habitat:** Mossy forests as an epiphyte or lithophyte altitude 1600-2300m.

**Description:** An erect medium sized plant. The flowers are small & fleshy. This species is also known as *Dendrobium fantasticum*, a later synonym.

**Cultivation Guidance:** At school we grow similar species as this warm (min. 15°C) through out the year in good light. Some we grow in pots some we grow mounted.

**Flowering season ?**

**Flask to flowering approx. 3yrs.**

**Seedling source:** Bob & Paddy Dadd
