

# Dendrobium tobaense

**Native of:** Northern Sumatra.

**habitat:** This epiphyte is found at an altitude of 1000 to 1500 m.

**Description:** This is a small sized, warm growing orchid with cylindrical stems with successively opening single flowers that arise from the base of the leaf sheath.

**Cultivation Guidance:** At school we grow similar species warm all year (min.15°C) and mounted on bark slab, we spray them once daily. Could also be grown in a pot

**Flowering season:** spring

**Flask to flowering approx:** 3yrs.

**Seedling source:** Bob & Paddy Dadd
