

Anacamptis morio x Serapias neglecta

Native of: Europe

Habitat: A natural hybrid terrestrial found in unimproved grassland in Europe.

Description: The plant grows during the winter months and flowers in May. It produces 4 to 8 large flowers up a 30cm stem. The influences of both parents are clear.

Cultivation Guidance: At School we grow in a cold greenhouse in winter in a soil based compost that is 2 parts John Innes number 2, one part mendip grit, one part cornish grit and one part peat. We keep the plants outside for the summer.

Flowering season: May

Seedling source: Grown from flask size at Writhlington.
