

Dendrobium tenellum

Native of: Java

Habitat: An epiphyte in forest from 1500 to 2200m

Description: A medium sized plant that grows thin stems about 30cm long with a swollen base. The flowers emerge in small groups near the top of the stems.

Cultivation Guidance: At School we grow this plant mounted and cool (minimum 10°C). We spray it daily in the summer but keep it dryish in the winter and put it under artificial light to help it flower well.

Flowering season: spring, summer and autumn

Plant source: Writhlington division
