

Oncidium enderianum

Native of: Brazil

Habitat: We found this species growing in Brazil's coastal cloud forest at between 1100 and 1300m altitude on exposed trunks and branches.

Description: A medium sized plant that can produce 80cm spikes with over forty 7cm flowers each beautifully patterned in brown and yellow.

Cultivation Guidance: At school we grow this cool (min.10°C) in good light and with more water when growing and less when resting (usually in the winter).

Flowering season: Autumn

Flask to flowering approx: 4yrs.

Seedling source – commercial grower
